0x00. C - Hello, World

- By Julien Barbier
- 🗱 Weight: 1
- $ilde{ textbf{H}}$ Project over took place from Jun 30, 2022 to Jul 1, 2022 you're done with 150% of tasks.
- ☑ An auto review will be launched at the deadline

In a nutshell...

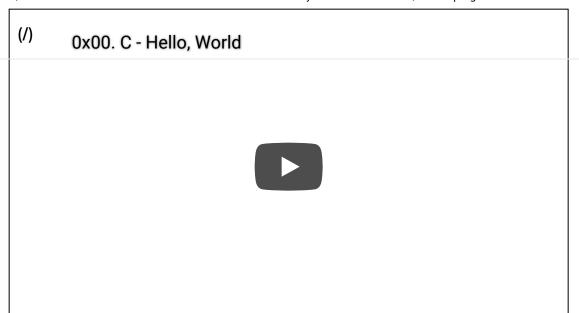

- o Auto QA review: 41.0/41 mandatory & 5.0/12 optional
- o Altogether: 141.67%
 - Mandatory: 100.0%
 - Optional: 41.67%
 - Calculation: 100.0% + (100.0% * 41.67%) == 141.67%

Concepts

For this project, we expect you to look at this concept:

• C programming (/concepts/26)

Resources

Read or watch:

- Everything you need to know to start with C.pdf (/rltoken/P01aLj9BDfDUOv-y9x82Yw) (You do not have to learn everything in there yet, but make sure you read it entirely first)
- Dennis Ritchie (/rltoken/YWFrRob_-Yo-_NQikMLI-g)
- "C" Programming Language: Brian Kernighan (/rltoken/W4oygfMgAp5Hyc7o6QuSYQ)
- Why C Programming Is Awesome (/rltoken/WYdE1novaWa0yt5fzGvLBw)
- Learning to program in C part 1 (/rltoken/aE pZLbexuLroHA0FmjLbw)
- Learning to program in C part 2 (/rltoken/3a5y1N-0FITaPbKRxIRLIQ)
- Understanding C program Compilation Process (/rltoken/idYJyVfQRZ9e5aljiT5UKg)
- Betty Coding Style (/rltoken/lu2Vb1CbDPMHuDJG1ilLKA)
- Hash-bang under the hood (/rltoken/zwv5CHLybXN6KFmsjbu_tg) (Look at only after you finish consuming the other resources)
- Linus Torvalds on C vs. C++ (/rltoken/JrokM8Pk6bd9wPqQvEfSAA) (Look at only after you finish consuming the other resources)

man or help:

- gcc
- printf (3)
- puts
- putchar

Learning Objectives

At the end of this project, you are expected to be able to explain to anyone (/rltoken/VGWjGaWZbgcLYTwfLEBmmQ), without the help of Google:

General

- Why C programming is awesome
- (/). Who invented C
 - Who are Dennis Ritchie, Brian Kernighan and Linus Torvalds
 - What happens when you type gcc main.c
 - What is an entry point
 - What is main
 - How to print text using printf, puts and putchar
 - How to get the size of a specific type using the unary operator sizeof
 - How to compile using gcc
 - What is the default program name when compiling with gcc
 - What is the official C coding style and how to check your code with betty-style
 - How to find the right header to include in your source code when using a standard library function
 - How does the main function influence the return value of the program

Copyright - Plagiarism

- You are tasked to come up with solutions for the tasks below yourself to meet with the above learning objectives.
- You will not be able to meet the objectives of this or any following project by copying and pasting someone else's work.
- You are not allowed to publish any content of this project.
- Any form of plagiarism is strictly forbidden and will result in removal from the program.

Requirements

C

- Allowed editors: vi, vim, emacs
- All your files will be compiled on Ubuntu 20.04 LTS using gcc, using the options -Wall -Werror -Wextra -pedantic -std=gnu89
- All your files should end with a new line
- A README.md file at the root of the repo, containing a description of the repository
- A README.md file, at the root of the folder of this project, containing a description of the project
- · There should be no errors and no warnings during compilation
- You are not allowed to use system
- Your code should use the Betty style. It will be checked using betty-style.pl
 (https://github.com/holbertonschool/Betty/blob/master/betty-style.pl) and betty-doc.pl
 (https://github.com/holbertonschool/Betty/blob/master/betty-doc.pl)

Shell Scripts

- Allowed editors: vi, vim, emacs
- All your scripts will be tested on Ubuntu 20.04 LTS
- All your scripts should be exactly two lines long (\$ wc -1 file should print 2)
- · All your files should end with a new line
- The first line of all your files should be exactly #!/bin/bash

More Info

Betty linter

To run the Betty linter just with command betty <filename>:

- Go to the Betty (/rltoken/wQ4sMfsWfxvyfN67Sc11zA) repository
- Clone the repo (/rltoken/wQ4sMfsWfxvyfN67Sc11zA) to your local machine
- · cd into the Betty directory
- Install the linter with sudo ./install.sh
- emacs or vi a new file called betty, and copy the script below:

```
#!/bin/bash
# Simply a wrapper script to keep you from having to use betty-style
# and betty-doc separately on every item.
# Originally by Tim Britton (@wintermanc3r), multiargument added by
# Larry Madeo (@hillmonkey)
BIN PATH="/usr/local/bin"
BETTY_STYLE="betty-style"
BETTY_DOC="betty-doc"
if [ "$#" = "0" ]; then
   echo "No arguments passed."
    exit 1
fi
for argument in "$@"; do
    echo -e "\n======= $argument ======="
    ${BIN_PATH}/${BETTY_STYLE} "$argument"
    ${BIN_PATH}/${BETTY_DOC} "$argument"
done
```

- Once saved, exit file and change permissions to apply to all users with chmod a+x betty
- Move the betty file into /bin/ directory or somewhere else in your \$PATH with sudo mv betty /bin/

You can now type betty <filename> to run the Betty linter!

Quiz questions

Great! You've completed the quiz successfully! Keep going! (Show quiz)

Taşks

0. Preprocessor

mandatory

Score: 100.00% (Checks completed: 100.00%)

Write a script that runs a C file through the preprocessor and save the result into another file.

- The C file name will be saved in the variable \$CFILE
- The output should be saved in the file c

```
julien@ubuntu:~/c/0x00$ cat main.c
#include <stdio.h>
 * main - Entry point
 * Return: Always 0 (Success)
 */
int main(void)
{
    return (0);
}
julien@ubuntu:~/c/0x00$ export CFILE=main.c
julien@ubuntu:~/c/0x00$ ./0-preprocessor
julien@ubuntu:~/c/0x00$ tail c
# 942 "/usr/include/stdio.h" 3 4
# 2 "main.c" 2
# 3 "main.c"
int main(void)
 return (0);
julien@ubuntu:~/c/0x00$
```

 QA Review

1(f) ompiler mandatory

Score: 100.00% (Checks completed: 100.00%)

Write a script that compiles a C file but does not link.

- The C file name will be saved in the variable \$CFILE
- The output file should be named the same as the C file, but with the extension .o instead of .c.
 - o Example: if the C file is main.c, the output file should be main.o

```
julien@ubuntu:~/c/0x00$ export CFILE=main.c
julien@ubuntu:~/c/0x00$ cat main.c
#include <stdio.h>
/**
  * main - Entry point
  * Return: Always 0 (Success)
int main(void)
{
        return (0);
}
julien@ubuntu:~/c/0x00$ ./1-compiler
julien@ubuntu:~/c/0x00$ ls
0-preprocessor 1-compiler
                                                             С
                                                                                         main.o

6. Size is not grandeur, and territory does not make a nation

mandatory

Score: 100.00% (Checks completed: 100.00%)

Write a C program that prints the size of various types on the computer it is compiled and run on.

- You should produce the exact same output as in the example
- · Warnings are allowed
- Your program should return 0
- You might have to install the package libc6-dev-i386 on your Linux to test the -m32 gcc option

```
julien@ubuntu:~/c/0x00$ gcc 6-size.c -m32 -o size32 2> /tmp/32
julien@ubuntu:~/c/0x00$ gcc 6-size.c -m64 -o size64 2> /tmp/64
julien@ubuntu:~/c/0x00$ ./size32
Size of a char: 1 byte(s)
Size of an int: 4 byte(s)
Size of a long int: 4 byte(s)
Size of a long long int: 8 byte(s)
Size of a float: 4 byte(s)
julien@ubuntu:~/c/0x00$ ./size64
Size of a char: 1 byte(s)
Size of an int: 4 byte(s)
Size of a long int: 8 byte(s)
Size of a long long int: 8 byte(s)
Size of a float: 4 byte(s)
julien@ubuntu:~/c/0x00$ echo $?
julien@ubuntu:~/c/0x00$
```

Repo:

- GitHub repository: alx-low_level_programming

- File: 6-size.c

☑ Done! Help Check your code >_ Get a sandbox QA Review

7. Intel

#advanced

Score: 100.00% (Checks completed: 100.00%)

Write a script that generates the assembly code (Intel syntax) of a C code and save it in an output file.

- The C file name will be saved in the variable \$CFILE.
- The output file should be named the same as the C file, but with the extension .s instead of .c.
 - Example: if the C file is main.c, the output file should be main.s

```
julien@ubuntu:~/c/0x00$ export CFILE=main.c
julien@ubuntu:~/c/0x00$ cat main.c
#include <stdio.h>
/**
 * main - Entry point
 * Return: Always 0 (Success)
 */
int main(void)
{
    return (0);
}
julien@ubuntu:~/c/0x00$ ./100-intel
julien@ubuntu:~/c/0x00$ cat main.s
    .file
            "main.c"
    .intel_syntax noprefix
    .text
    .globl main
            main, @function
    .type
main:
.LFB0:
    .cfi_startproc
    push
            rbp
    .cfi_def_cfa_offset 16
    .cfi_offset 6, -16
   mov rbp, rsp
    .cfi_def_cfa_register 6
    mov eax, 0
    pop rbp
    .cfi_def_cfa 7, 8
    ret
    .cfi_endproc
.LFE0:
            main, .-main
    .size
    .ident "GCC: (Ubuntu 5.4.0-6ubuntu1~16.04.2) 5.4.0 20160609"
    .section
                .note.GNU-stack,"",@progbits
julien@ubuntu:~/c/0x00$
```

Repo:

- GitHub repository: alx-low_level_programming
- Directory: 0x00-hello_world
- File: 100-intel

8. UNIX is basically a simple operating system, but you have to be a genius to understand the simplicity

#advanced

Score: 0.00% (Checks completed: 0.00%)

Write a C program that prints exactly and that piece of art is useful" - Dora Korpar, 2015-10-19, followed by a new line, to the standard error.

- You are not allowed to use any functions listed in the NAME section of the man (3) printf or man (3) puts
- Your program should return 1
- Your program should compile without any warnings when using the -Wall gcc option

```
julien@ubuntu:~/c/0x00$ gcc -Wall -Werror -Wextra -pedantic -std=gnu89 -o quote 101-
quote.c
julien@ubuntu:~/c/0x00$ ./quote
and that piece of art is useful" - Dora Korpar, 2015-10-19
julien@ubuntu:~/c/0x00$ echo $?
1
julien@ubuntu:~/c/0x00$ ./quote 2> q
julien@ubuntu:~/c/0x00$ cat q
and that piece of art is useful" - Dora Korpar, 2015-10-19
julien@ubuntu:~/c/0x00$ grep printf < 101-quote.c
julien@ubuntu:~/c/0x00$</pre>
```

Repo:

- GitHub repository: alx-low_level_programming
- Directory: 0x00-hello_world
- File: 101-quote.c
